

Stick Building the Ross Brother's Hardware

While visiting Fort Edmonton Park in Edmonton, Alberta, Canada I photographed the re-creation of the Ross Brother's Hardware and Tinsmith's Shop originally built in 1884.

I usually use the Stick Build Method for adding onto existing structures. When I originally constructed the Ross Brother's Hardware, I used the Loop Subdivide method to construct the hardware and stick built to add the Tinsmith's Shop on the back.

749

However, here we'll construct the whole structure using the Stick Build Method.
